

### Overview (10 marks)

Each student is required to submit an individual document. The individual document is a half-page to 1-page reflection of the lessons learned from the research project experience. These lessons can be with respect to the development of course modules, learning about Raspberry PI, understanding how to build curriculum material, teamwork, among others. The following is a list of questions that might assist you in writing this document. The grade will be based on your thoughtfulness and insight of your answers.

- Do you think you could have done this project by yourself?
- What did you learn from this project?
- Which part of the project you believe worked well?
- Which part of the project you believe did not work well?
- In your next similar project, what would you consider doing differently?
- What ideas taught in class you believe were not useful to this project, and why?
- What recommendations do you have for future TCSS 499 students working in similar project?
- Did this project help improve your understanding of Internet of Things? Why or Why not?
- Has the project helped you improve your confidence about the Internet of Things? Why or Why not?
